

2009 RECYCLING REPORT

During 2009, approximately 441.1 metric tonnes of recyclables were collected by the contractor as part of the Township's curbside collection recycling program. This represents an 8.66% decrease in tonnage over 2008 when 482.9 tonnes were collected. As the chart below illustrates, less fibers and co-mingled materials were collected in 2009. Co-mingled material includes tin, aluminum, plastics and glass.

Thank you to everyone participating in the Township's recycling program. Not only does recycling help conserve valuable resources, it minimizes waste and diverts items away from the landfill site.
