

2010 RECYCLING REPORT

During 2010, approximately 444.1 metric tonnes of recyclables were collected by the contractor as part of the Township's curbside collection recycling program. This represents little change in tonnage over 2009 when 441.1 tonnes were collected. As the chart below illustrates, less fibers and co-mingled materials were collected in 2010. Co-mingled material includes tin, aluminum, plastics and glass.

Thank you to everyone participating in the Township's recycling program. Not only does recycling help conserve valuable resources, it minimizes waste and diverts items away from the landfill site.
