

Rapid Road Construction Notice

September 11, 2024

Single Surface Treatment

A single surface treatment (SST) will be applied to Rapid Road as a preventative maintenance technique. The treatment consists of spraying a uniform application of asphalt emulsion (liquid) followed by a layer of cover aggregate (stone). SST preserves and reinforces the existing double surface treated (DST) road surface while creating a new waterproof barrier to extend the life expectancy of the road.

Schedule Update

Township staff will be completing the final grading of the gravel cutouts and ditching at the Timm Road intersection starting Monday, September 16th.

Greenwood Paving is scheduled to start resurfacing Rapid Road on Wednesday, September 18th, subject to weather conditions. The gravel cutouts and the intersection of Timm Road will receive a double treatment surface (DST) and a new single surface treatment (SST) will be applied to the entire section of Rapid Road.

The resurfacing is anticipated to take between two to four days to complete.

Road Closure and Traffic

Traffic delays can be expected during the week of September 16th as daily lane restrictions may be in effect from 7am to 7pm.

Post Surface Treatment

The road will have a granular appearance immediately following single treatment surface application. Once the float (gravel) continues to set, the surface will become harder and smoother.

Center line painting will be reinstated after that material has set sufficiently and is schedule for October.

Questions and Concerns

Council and Township staff would like to thank you for your patience with the construction project. If you have any concerns related to the project, please let us know by contacting the Road Superintendent.
